Adamic, Dora
Modeling neuroblastoma engraftment and invasion in a humanized 3D bone microenvironment 43

Agrawal, Aditya
IRF6 stabilizes the epithelial state and restrains a pro-metastatic EMT programme in cancer 44

Bacon, Jasmine
Nuclear-encoded mitochondrial-associated genes as potential therapeutic targets for metastatic prostate cancer 45

Balaji, Neha
A quiescent cancer stem cell signature in HCC reveals perivascular niche–dependent NOTCH-mediated resistance 46

Balamurugan, Kuppusamy Presenter: Sterneck, Esta
E-cadherin fuels metastatic breast cancer by reprogramming mitochondrial metabolism: a targetable vulnerability 47

Banerjee, Anasuya
Fluid shear stress drives sema4b-mediated invasiveness in hepatocellular carcinoma 48

Berico, Pietro
3D chromatin rewiring couples mechanoadaptation to state-specific therapeutic vulnerabilities during metastasis 49

Bernardo, Alejandro
Fibrotic niche construction in lung adenocarcinoma brain metastasis partially recapitulates the stromal architecture of matched primary tumours 50

Beschauner, Tobias
Functional enhancer reporters to dissect cancer cell-intrinsic regulatory programs driving targeted therapy and immunotherapy cross-resistance 51

Blazquez, Raquel
Histological growth patterns define biological behavior and clinical risk in brain metastases 52

Calizo, Ana
Patient autoantibodies bind cancer cells 53

Cannata, Chiara
Highly plastic hybrid EMT states license amoeboid competence during metastatic dissemination 54

Castillo Serrulla, Pablo
Age-dependent metabolic reprogramming of microglia as a determinant factor in the progression of brain metastasis 55

Chelazzi, Maria Rita
A DIAPH1-SOWAHC signaling module promotes macropinocytosis in cervical cancer cells by regulating actin dynamics and actomyosin contractility 56

Chin-Yu, Chiu
Loss of SLC35A3 promotes gastric cancer metastasis by altering integrin glycosylation 57

Choi, Hojeong
Myocardin-independent regulation of a smooth muscle-like transcriptional program in stem-like gastric cancer 58

Cruz Vílchez, Víctor Manuel
Urea cycle upregulation is a metabolic adaptation driving liver-specific metastatic organotropism 59

Curbelo Piñero, Daniel
Decoding organ-specific immunometabolic adaptation in metastatic cancer 60

D'Agnelli, Alessandro
PCYOX1 drives metastatic progression in triple negative breast cancer: from biology to drug discovery 61

Dagar, Lalita
Uncovering metastasis associated cell states via integrated transcriptomic and copy-number alterations in colorectal cancer 62

de Dios Panal, Elena
Killer γδ T cells protect the lung environment from metastatic breast cancer 63

Delle Cave, Donatella
L1CAM loss defines a metastatic epithelial phenotype driving matrisome remodeling in pancreatic ductal adenocarcinoma 64

Dibus, Michal Presenter: Rosel, Daniel
Effective prevention of metastasis using a novel multi-kinase inhibitor 65

Dolaner, Simay
Fibroblast plasticity drives resistance of lung cancer cells to KRAS inhibitors in a spheroid co-culture model 66

Domagalski, Mikolaj
Adipose stromal cells modulate invasive behaviour in colorectal cancer 67

Domentean, Stefani
UBE2C as a promising therapeutic target in brain metastases 68

Duval, Carlotta Presenter: Donati, Giacomo
Building an invasive cytoplasm: stress-induced RNA transport drives cancer invasion 69

Fath, Alicia
The role of neutrophils in VEGF-C dependent pulmonary metastasis 70

Fréreux, Cécile
Regulation of SOX2-associated progenitor states during lung adenocarcinoma progression and metastatic dormancy 71

Fricaud, Bérénice
Molecular interplay between embryonic aortic cues and neuroblastoma cell-intrinsic programs triggering migration toward the aortic wall 72

Garampon, Flavie
Fluid shear stress regulates autophagy to shape circulating tumor cell plasticity 73

Gérardin, Agathe
A zebrafish screen uncovers TCOF1 as a regulator of both neural crest development and melanoma dissemination in vivo 74

Gerosa, Benedetta Presenter: Bertolini, Giulia
Cytokine-induced memory-like NK cells efficiently eliminate circulating metastasis-initiating cells captured by a novel CTC-trap device 75

Godet, Ines
RAS targeted therapy causes the elimination of dormant metastasis 76

Gómez Ruiz, Sandra
Spatially resolved analysis of cancer-associated fibroblast niches during breast cancer metastasis 77

Greenall-Ota, Josephine
Screening transcriptional drivers of estrogen receptor positive breast cancer metastasis 78

Greiter, Eva
Image-based assay for the dynamic monitoring of slow cycling live cancer cells 79

Heinrich, Hannah Presenter: Bohnert, Regina
Identification of intra-tumour heterogeneity and metabolic variation in chromophobe RCC by spatial omics 80

Honjo, Mai
Enhanced extracellular vesicle paclitaxel loading accompanies acquired drug resistance in ovarian clear cell carcinoma 81

Huang, Li-Tzu Presenters: Cheng, Hung-Chi; Huang, Li-Tzu

Targeting the ERK-Pgp1 signaling axis as a convergent strategy to synchronously defeat chemoresistance and immune-shielded metastatic colonization 82

Hücker, Sarah

Mutational profiling of circulating tumor cells from prostate cancer patients 83

Huynh, Ana Lou

Reshaping tumor-associated macrophages through nadph oxidases inhibition to limit triple-negative breast cancer aggressiveness 84

Imanpour Yordshahi, Aylar

Dynamic remodeling of AP-1 transcriptional programs during tumor evolution and targeted therapy response 85

Jala, Julia

Nuclear envelope composition couples invasive stress to NR4A1-mediated adaptation in prostate cancer 86

Javary, Joaquim

Deciphering PI3K inhibitor resistance mechanism to guide rational combination therapies in metastatic gastric cancer 87

Jerabkova-Roda, Katerina

Peripheral positioning of lysosomes supports melanoma aggressiveness 88

Cancelled 89

Kim, Ju-Hwa

ETS1 integrates metastatic plasticity and immune evasion in colorectal cancer 90

Kim, Mi-Young

Loss of Nuclear Protein A is associated with a mesenchymal phenotype in breast cancer 91

Kim, Taehyun
Expression and clinical relevance of transcription factor A in HER2-positive breast cancer 92

Knittel, Jessica
Complementary ex vivo and in vitro models to assess the role of ATF2 in early peritoneal metastatic colonization 93

Kubitz, Lea
Single-cell DNA methylation profiling of circulating tumor cells enables tissue-of-origin identification in cancer of unknown primary 94

Lamprou, Maria
Investigating the role of cell competition in colorectal cancer liver metastasis 95

Lasbareilles, Savinien
Modulation of the expression and the localisation of the pro-metastatic kinesin:KIF20A by the mechanical properties of the HCC microenvironment 96

Lauriola, Antonella Presenter: Ferrari, Annachiara
Studies on TROP2 expression in rare peritoneal metastases 97

Libric, Lucija
Three-dimensional phenotypic plasticity of carboplatin-resistant ovarian cancer cells 98

Lin, You-Cheng
Mechanistic insights into tumor–immune crosstalk governing lung metastasis in head and neck squamous cell carcinoma 99

Ling, Lun Ling
Cytokine and E3 ligase IL-2/KLHL20 signal-mediated ubiquitination of PD-1 modulates its protein stability and shapes immune activity 100

Liu, Hsun
Stress-induced interleukin-33 transcription and unconventional secretion promote tumor progression and therapeutic resistance in esophageal cancer 101

Cancelled 102

Mazan-Bury, Alicja
Sculpting the niche - the role of MLK4 in breast cancer progression 103

Mendoza Mendoza, Erika
Wnt-driven adhesion and extracellular matrix dynamics in breast cancer Metastasis 104

Menhertová, Tamara
Modified beta-glucans as potential immunomodulatory drug carriers targeting tumor progression and invasion in 2D and 3D colorectal cancer models 105

Cancelled 106

Moreno-Layseca, Paulina
The ion exchanger ATP1A1 controls breast cancer cell migration through integrin endocytosis 107

Mukhtarova, Gunel
Spatial reprogramming of Sonic Hedgehog signaling defines cancer stem-cell plasticity in metastatic prostate cancer 108

Murgai, Meera
Pericyte-tumor crosstalk promotes metastatic tumor dormancy through PIEZO1-dependent phospholipid transfer. 109

Nastaly, Paulina
Emerin-dependent nuclear envelope architecture links metastatic nuclear stress to immune-silent cGAS signalling in prostate cancer 110

Nicolescu, Stefan
Pregnane X Receptor (PXR) contributes to phenotypic plasticity and modulates the sensitivity to targeted therapies in melanoma 111

Nikolakopoulos, Apostolos Panagiotis
Clonal cooperation drives lymph node metastasis 112

Ojeda-Puertas, Mónica
Rock inhibition disrupts neuroblastoma cellular plasticity and migration, promoting differentiation in neuroblastoma tumors 113

Oliveira, Erica
Therapy-resistant colorectal cancer is vulnerable to oncogenic pathway hyperactivation 114

Olotu, Opeyemi
Hypoxic-induced STC2 N-glycosylation remodeling promotes stress adaptation and JAG1 signaling in prostate cancer 115

Padilla Aguilera, David
Testing the requirement for post-translational processing of e-cadherin for cancer cell survival during metastasis 116

Patel, Angana Presenter: Sayin, Volkan
Ageing promotes metastasis via activation of the integrated stress response 117

Patel, Urvi
Therapeutic targeting of extracellular vesicles in triple negative breast cancer metastasis 118

Pelicano, Catarina
CAF subtypes shape distinct epigenetic landscapes in pancreatic cancer 119

Pietraszek-Gremplewicz, Katarzyna
Adipocytes promote colorectal cancer cell invasion by altering glycolysis and lipid metabolism 120

Pottendorfer, Elisabeth
Dissecting tumor suppressor-specific mechanisms of metastatic progression and immune evasion 121

Pradhan, Nikita
Mapping perfusion influence on perivascular and hypoxic niches in hepatocellular carcinoma 122

Rácz, Vanessa Presenter: Luthold, Carole
Extracellular matrix composition dynamically regulates melanoma cell plasticity 123

Ramachandran, Revathy
CREBRF mediates cellular stress response and transcriptional reprogramming in triple negative breast cancer 124

Renzi, Anna
Extracellular matrix stiffness controls transposable elements through Pin1 to promote immune evasion in breast cancer 125

Rotankova, Nadezhda
Early- and late-stage metastasis are differentially induced by the tumor microenvironment 126

Saberiseyedabad, Kamyab
Cholangiocytes during liver metastasis initiation, friends or foes? 127

Sajib, Saikat Das
Single-cell derived mammary EMT signature reveals prominent epithelial loss with limited mesenchymal gain 128

Saup, Rafel Presenter: Garvalov, Boyan
Reversible resistance to BRAF and MEK inhibitors in melanoma is sustained by changes in the extracellular matrix, epigenetic regulators and ferroptosis suppression 129

Schauer, Nele
Targeting the intra-metastatic microbiome in colorectal cancer 130

Schmaus, Anja
CEMIP and hyaluronan remodeling in therapy resistant melanoma cells 131

Schneider, Maximilian
Oncogenic E3 ligase adaptors MAGE-A3/6 promote metastatic cancer progression through degradation of BAP18 132

Schöniger, Niklas
DAMP-induced Ca^{2+} signaling dynamics differ across breast cancer cell lines with distinct histological growth patterns 133

Seidlitz, Therese
Identification of genes associated with metastatic progression in intestinal-type gastric cancer 134

Selbert, Louisa
MUC1 protects human colorectal cancer cells from NK cell-mediated killing 135

Sim, Nicholas Presenter: Li, Yinghui
Tweak/Fn14 signalling driven super-enhancer reprogramming promotes metastasis in triple-negative breast cancer 136

Simão, Vinícius Augusto
Melatonin-primed mesenchymal stem cell extracellular vesicles modulate ovarian cancer plasticity and enhance therapeutic sensitivity 137

Simiczyjew, Aleksandra
Metabolic remodeling accompanies invasiveness in melanoma cells resistant to BRAF/MEK inhibitors 138

Sleeman, Jonathan P.
The Id1/Id3 inhibitor x6632 suppresses cancer initiation, growth and metastasis by targeting both tumor cells and the tumor-associated vasculature 139

Cancelled 140

Soares, Beatriz
Exploring liver metastasis-induced systemic immune remodelling in breast cancer 141

Spina, Elena
Building an immunoprotective niche for lung metastasis under oxidative stress 142

Stabellini, Lucrezia
Metastatic dissemination as an immunologically vulnerable window in triple negative breast cancer 143

Stornante, Carla
Endothelial CD137 regulates vascular–immune communication during metastatic progression 144

Stupia, Simone
A lineage- and cell-state-specific HLA class II expression program sensitizes metastatic melanoma to CD4 T cells 145

Su, Pei-Chia
Stromal CCL2/CXCL10/SPARC axes drive pro-tumor CHI3L1 expression for microenvironmental modulation in pancreatic cancer progression and therapeutic innovation 146

Tabatabaee Dapari, Aliye Sadat
High throughput discovery of epigenetic modulators that restore immunogenicity in prostate cancer bone metastases 147

Tang, Binwu
TGF-β over-rides microenvironmental control of cancer stem cells 148

Tornatore, Francesca
An extracellular HSP90 complex rewires surface receptor interactions to promote integrin recycling and cancer metastasis 149

Truong, Vi
Novel interactions of mixed-lineage kinase 4: identifying key binding partners in breast cancer 150

Vaitkeviciute, Monika
Uncovering the molecular determinants of intravascular adhesion of metastatic cancer cells 151

Vallès, Teia Presenter: Rico Pastó, Marc
Modeling the circulation survival of solid tumor cancer cells using a novel biomimetic system 152

Vallès, Teia
Defining a circulation survival threshold to predict cancer cells' aggressiveness using a novel in vitro circulation system 153

van de Kaa, Demi
NALCN regulates 'normal' stem cell escape and dissemination from gastric epithelium 154

Varis, Vera
Opposing effects of TGF-β downstream targets on tumoroid growth and metastasis: 3D co-culture assay to study endothelial secreted factors 155

Vega, Francisco M.
RhoGTPase signalling drives phenotypic plasticity and metastatic potential in neuroblastoma cancer stem cells 156

Verhoeven, Lisa
Tumor necrosis factor alpha-signaling decreases the expression of genes associated with mature hepatocytes in well-differentiated hepatocellular carcinoma cells 157

Vitale, Emanuele
Decoding thyroid cancer plasticity: RUNX2 defines the inflammatory states driving differentiated-to-anaplastic thyroid carcinoma evolution 158

Vokshi, Bujamin
TROP2 regulates L1CAM and the metastasis-initiating phenotype in lung cancer 159

von Zuben de Valega Negrao, Cyro
Metastasis-driven nanoparticle biological identity: implications for CTC targeting and immunotherapy 160

Wang, Yi-Ching
Rewiring PD-1 stability: JAK2 couples immune checkpoint signaling to T-cell suppression 161

Ward, Gwennan Delyth
Palmitoylation-mediated signaling shapes tumor-immune cell communication in the metastatic microenvironment 162

Weber, Hanna Theresa
The potential of pharmacological activation of RASSF1A to combat therapy resistance in ER+ breast cancer using patient-derived cell culture systems 163

Weng, Sirui
Recurent intra-tumour heterogeneity is a hallmaker of metastatic prostate cancer 164

Wimalasena, Virangika
Histone acetyltransferases promote the pro-metastatic basal cell state transition in luminal breast cancer 165

Wong, Ashley
Combined single-cell genome and chromatin profiling uncovers how chromatin context determines somatic mutation and repair rates in colorectal cancer metastases 166

Yasar, Ceyda
Single-cell RNA sequencing analysis of metastasis to illuminate metastatic transition across cancer types 167

Ziegler, Roman Presenter: Brábek, Jan
Migrastatics: From Concept to Clinic 168

Zylka, Martha Magdalena
Patient-derived organoid model of lung colonization reveals epithelial niche reprogramming by infiltrating bone sarcoma cells 169
