The m6A reader YTHDC1 links niche-derived microRNAs to splicing-dependent genome stability in myelodysplastic syndromes		51
Arecco, Niccolo		
Hunting for small molecules to understand the spliceosome machinery		52
Arora, Rajika		
SRSF1 condensates enhance splicing by two mechanisms: RNA protection and surface exposure		53
Arpa, Enes	Presenter: Gatfield, David	
Loss of SMG6-dependent RNA decay suppresses hepatocellular carcinoma and reveals a role for NMD in endogenous dsRNA homeostasis		54
Assenza, Salvatore	Presenter: Chillón, Isabel	
Conserved architecture of a functional lncRNA-protein interaction in the DNA damage response pathway		55
Athavudeen, Shameerudeen		
Systematic characterization of non-triplet alternative splicing reveals diverse regulatory outcomes		56

Azuma, Yukari		
Mechanistic insight into microRNA-responsive mRNA OFF switch		57
Bader, Zein	Presenter: Komiya, Reina	
Regulation and dynamics of the nuclear argonaute in rice reproduction		58
Baev, Vesselin		
Dynamic expression of tRNA-derived fragments across the healthy human endometrial cycle		59
Banik, Poulami	Presenter: Stanek, David	
Targeted antisense oligonucleotide therapy rescues PRPF31 expression in retinitis pigmentosa caused by a splicing mutation		60
Barrey, Eric		
Antisense oligonucleotides targeting the SARS-CoV-2 genome to inhibit viral replication: in vitro screening and infectious hamster model		62
Bar-Yosef, Hagit		
Capturing active translation by GRASP-SeRP: a gel-free workflow for high-resolution mapping of co-translational interactions		61
Baumgarten, Sebastian		
The repressive ribosome: functional characterization of a variant ribosomal RNA inhibiting protein synthesis		63
Bax, Danique		
Genome-wide transcriptional noise dynamics in development		64
Behrens, Gesine		
Mechanistic insights into cooperative mRNA target recognition and regulation by Roquin and Regnase-1		65
Benetti, Natalia		
Dissecting long non-coding RNA function using in vivo synthetic biology		66

Bhandare, Pranjali	Presenter: Bhandare, Pranjali; Mathew, Rose	
A role for late-stage spliceosome factors in RNA polymerase II transcription		67
Biancolella, Antonio		
Revealing riboregulation of enzymes in a cell-free metabolic system		68
Biayna Rodriguez, Josep		
The periphery of nuclear speckles defines a spatially and temporally regulated compartment of long-lived intron-retained RNAs that resolves during mitosis		69
Birbaumer, Tosca		
The role of NUDIX enzymes in cellular metabolism and non-canonical mRNA capping		70
Blümel, Nicole	Presenter: Müller-McNicoll, Michaela	
Heat stress rewires NXF1 ribonucleoprotein complexes towards endogenous retrovirus surveillance		71
Boreikaite, Vytaute		
Mechanism of spliceosome termination		72
Braun, Gabriel		
Regulation of the mRNA decay-associated DEAD-box ATPase Dhh1		73
Brehm, Martin		
One complex, two functions – how PETISCO works in piRNA processing and histone mRNA storage		74
Busam, Jonas	Presenter: Busam, Jonas	
Intron retention mediates selective sorting of mRNAs into nuclear speckles in response to hypoxia		75
Buyannemekh, Khulganaa		
Profiling C. elegans pre-rRNA processing using Nanopore sequencing		76

IFN-alpha restrains miRNA EV-packaging to support cell autonomous gene silencing	296	
Van Ravenstein, Sabrina		
Nuclear pre-mRNA damage recruits the ASC-1 complex for the initiation of spliceosomal disassembly	297	
Vasquez, Layla		
Learning and memory in Prader-Willi Syndrome through the lens of snord116 in catecholaminergic cells.	298	
Vecchio, Lisa		
Global analyses of senataxin protein and RNA interactomes provide new insights into its function in vivo	299	
Verstraten, Ruth	Presenter: Depledge, Daniel	
Direct read and analysis of polymerase III transcribed RNAs	300	
Vogt, Markus		
4TU-Live-seq reveals coupling of transcription elongation and post-transcriptional splicing in living vertebrates	301	
Vopalensky, Vaclav	Presenter: Pospisek, Martin	
Poxviruses and yeast virus-like elements: Discovery of their uncapped and 5'-polyadenylated mRNAs shows evolutionarily conserved transcriptional and translational strategies	302	
Waghalter, Miriam		
Cryo-EM structural studies reveal novel binding mode of potent oxazolidinone to the S. aureus ribosome	303	
Wang, Rui		
RBM4 regulates alternative splicing and stem cell maintenance in normal and malignant hematopoiesis	304	
Weber, Jan	Presenter: Kilchert, Cornelia	
Exploring the role of Cleavage Factor IB in substrate targeting to the nuclear exosome complex	305	

Weber, Jan	
Exploring the role of Cleavage Factor IB in exosome recruitment to substrate RNAs	306
Wild, Klemens	
Pseudouridine increases ribosome stability in a thermophilic eukaryote	307
Wilson, Jarrett	
Mapping Sm protein binding sites on snRNA using RNP-MaP	308
Wirth, Alexander	Presenter: Peschek, Jirka
Eukaryotic tRNA ligases mediate RNA break repair	309
Witzenberger, Monika	
An expanded enzymatic toolkit for recording RNA interaction and localization in cells	310
Wojtus, Joanna	
Binding of host cellular RNA by antiviral IFIT proteins affects homeostasis of cancer cells	311
Wu, Zhenzhen	
ZAKα senses mRNA stasis at the ribosomal exit channel	312
Xu, Fu	
VIRMA couples m6A-dependent RNA turnover to purine-driven bioenergetics in cancer	313
Xue, Yuanchao	
Mapping RNA-mediated enhancer–promoter contacts to decode noncoding risk variants	314
Yang, Ju-Hee	
Targeted Inhibition of LINC01419 suppresses the tumorigenic phenotypes in Hepatocellular Carcinoma	315
Yang, Weiwei	
MetaGPA-enabled discovery of RNA modifications in environmental RNA phage microbiome	316

Yu, Haopeng	
Decoding the RNA language with AI-driven Foundation Model	317
Zabradý, Katerina	
Characterization of ESS2 phosphorylation by CDK11	318
Zadalimomen, Ramin	
Defining the role of targeted rRNA acetylation in Rps14 (uS11) positioning during 40S ribosome biogenesis	319
Zandhuis, Nordin	
Defining the role of the METTL16 mRNA methyltransferase in regulating CD8 T cell function	320
Zappone, Sabrina	
Mapping direct RNA–protein interactomes, from condensate-forming RNAs to mislocalized disease transcripts	321
