

Abdul Fattah, Muhammad Zaher	
Opening chromatin via HDAC6 inhibition induces synthetic lethality with radiotherapy in LKB1-deficient NSCLC	44
Adelantado Rubio, Alba	
Glucose-transporter inhibitors impair fork progression and induce replication stress	45
Aithal, Aditya	
Exploring molecular mechanisms involved in the resolution of transcription-replication conflicts in human cells	46
Aldwaik, Reem	
Oncogenic HRAS-driven transcriptional dysregulation promotes R-loop-mediated replication stress and recurrent chromosomal fragility	47
Aze, Antoine	
Identification and functional characterization of a novel DNA damage tolerance factor linking translesion DNA synthesis with innate immune signaling	48
Baret, Théo	
A machine learning-based landscape of common fragile sites in human cortical organoids and their involvement in neurological disorders	49
Bekdash, Amira	
The role of the chromatin remodeler Fun30 in maintaining genomic stability in <i>Saccharomyces cerevisiae</i>	50
Bielinsky, Anja	
Divergent disease mechanisms arising from MCM10 dysfunction	51
Borgal, Lori	
DNA-associated roles of Asp/ASPM may contribute to cell cycle efficiency of transit amplifying stem cell progeny	52
Bromley, Kendall	
The loss of DNA2 results in sister chromatid cohesion defects	53

Cortone, Giuseppe

DDX11 clears replication protein A from single-stranded DNA 54

Coulée, Manon

Lagging strand is permissive to the integration of the transposable elements in the mammalian genome 55

da Camara, Bryce

Presenter: Premashankar, Ashwini

Rewiring DNA repair with PARP-based chemical inducers of proximity 56

De Clerico, Alessandra

Dissecting the H3.3 proximal interactome reveals a chaperone axis safeguarding genome integrity, within a network rewired by cancer mutations 57

Debelley, Quentin

Innate immunity, a trigger of translesion synthesis? 58

Dekker, Nynke

Histone extraction and retention by CMG at a single nucleosome 59

Di Feo, Flavia

Ck2 inhibition sensitizes brca-proficient cancer cells to parp inhibitors by stimulation of gap accumulation 60

Diepeveen, Emma

Evolutionary dynamics of DNA repair genes across primate phylogeny 61

Eastwood, Evelyn

Towards the reconstitution of human DNA replication initiation 62

Elmokadem, Mona

Role Of protein-protein interaction in the DNA DSB repair and genome stability maintenance 63

Fajri, Nora

DNA methylation maintenance coordinates with the lagging strand synthesis 64

Falbo, Lucia		
SSRP1-driven chromatin hyperactivation creates vulnerability to PARP inhibitor		65
Fisicaro, Samuele		
H2BK120 monoubiquitination regulates replication fork remodeling and protection during replication stress		66
Galey, Louise		
Intrinsic limitations of the dna replication checkpoint (drc) upon replication stress and consequences on genome stability		67
Garcia-Lepe, Ulises		
Deregulated origin firing drives micronuclei formation following ATR inhibition		68
Gavet, Olivier		
Cyclin A2 overexpression drives replication stress-induced chromosome breakage and aneuploidy in p53-deficient cells		69
Gorbunova, Vera		
To be presented onsite		70
Gulyas, Leah		
Mitosis remodels key replisome activities to promote replication through protein barriers		71
Gupta, Rajat		
Multi-omics profiling identified SETD1A-associated chromatin remodelling underlying radiation resistance in locally advanced head and neck cancer		72
Heuzé, Jonathan	Presenter: Poli, Jérôme	
The checkpoint prevents fork collapse by managing transcription-replication conflicts		73
Jacques, Caleb		
UV-DDB stimulates SMUG1 and TDG product release in nucleosome core particles		74
Jung, Woo Jae	Presenter: Kang, Sukhyun	
Mechanism of PCNA unloading by ATAD5-RLC		75

Kamar, Joyce	Presenter: Simon, Itamar	
Baseline ATR signaling enforces domain-wide origin synchrony that is dismantled under stress		76
Karagyozyova, Tina		
Role of replication timing regulator RIF1 in coordination of transcription and replication in S phase		77
Kató, István		
Replication independent role of TLS polymerases		78
Kato, Manami		
From replication stress-induced cardiac endothelial senescence to a therapeutic vaccine strategy for heart failure		79
Kefalas, Georgios Dionysios	Presenter: Petropoulos, Michail	
Replication fork safeguard in oncogene-driven stress and PARP inhibitor vulnerability		80
Kelley, Jessica		
Single-molecule imaging of H2A-H2B dynamics during replication		81
Kim, Keun-Cheol		
Cannabinoids suppress E2F1-Driven DNA replication through H3K9me3-dependent chromatin remodeling		82
Korfiati, Celine	Presenter: Fragkos, Michalis	
Extracellular vesicles derived from human infrapatellar fat pad mesenchymal stem/stromal cells do not induce genetic toxicity in U2OS cells		83
Krishna, Shwetha		
RNA modification regulates DNA replication dynamics and safeguards genome integrity		84
Kutrovski, Dimitar		
Exchange rate atlas of DNA damage response proteins		85
Labagnara, Marco		
Optogenetic tripwires resolve models of how cells count DNA breaks		86

Liang, Yu	
Endogenous DNA breakage at mammalian rDNA and the regulatory roles of TTF1	87
Liu, Chaoyu	
Investigating TRAIP Inhibition as a therapeutic strategy for targeting genome instability in cancer	88
Long, Haizhen	
CDK2–CK2-Mediated H2A.Z phosphorylation promotes replication origin licensing in G1 phase	89
Martinez, John	Presenter: Seluanov, Andrei
Knock-down of LINE1 transposable elements extends lifespan and healthspan, and doubles reproductive lifespan in mice	90
Milletti, Giacomo	
Ubiquitin-dependent degradation of p27Kip1 and p21Waf1/Cip1 by AMBRA1 ensures G1 and S phase progression and limits replication stress	91
Miriam, Hui Emmanuela	
BCDX2 targets HLTF to stalled replication forks to promote fork reversal	92
Narassimprakash, Hemalatha	Presenter: Marheineke, Kathrin
Ploidy-dependent modulation of DNA replication kinetics in Xenopus	93
Naren, Padmashri	
Exploring the Lamin B1-Ku complex interaction and its potential link to DNA repair	94
Nielsen, Olaf	
Modest increase in dATP concentration causes checkpoint activation by inhibiting ribonucleotide reductase	95
Núñez-Martín, Iván	Presenter: Gómez-González, Belén
Yeast histone mutants reveal two major mechanisms of replication fork breakage mediated by transcription	96

Nunez-Vazquez, Rocío

Temporal control of HIRA-dependent chromatin states during DNA replication 97

Oliva-Santiago, Marta

ATR enforces a fidelity-first hierarchy of translesion polymerases by regulating Pol ζ recruitment and activity 98

Otarbayev, Daniyar

The role of ATAD5 in the suppression of single-stranded DNA gaps 99

Parker, Emma

Presenter: Hiraga, Shin-ichiro

Phosphorylation of human RIF1-Long by an unconventional CDK is required for replication stress resistance 100

Gassó-Alern, Adrià

B cell activation drives dynamic remodelling of DNA repair programmes 101

Perez Gomez, Laura

Dissecting BRCA2-mediated ssDNA gap repair using domain-specific breast cancer variants 102

Petersen, Mikkel Bo

Redox-sensitive fork speed regulation couples nucleotide fluctuations to genome stability 103

Ponndara, Sokrich

How does the *B. subtilis* SMC complex promote chromosome segregation? 104

Rainey, Michael

Cdc7 and cdk8 kinases cooperate to support DNA replication origin firing in human cells 105

Reis de Andrade, Joana

Investigating whether disruption of replication stress response pathways shapes distinct copy number alteration landscapes using single-cell genome sequencing 106

Ribeyre, Cyril		
Under-licensing of replication origins induces DNA synthesis in G2 phase	107	
Rosas Bringas, Fernando		
Replisome histone-binding domains promote efficient chromatin replication	108	
Rutledge, Hannah	Presenter: Duderstadt, Karl	
Real-time visualization of CAF-1-mediated histone deposition	109	
Sajid, Atiq		
Single-molecule landscape of origin chromatin defines the structural determinants of replication efficiency	110	
Sali, Merve		
UBAP2L contributes to the DNA replication stress response	111	
Sambel, Larissa		
Single molecule imaging uncovers the dynamics of DNA polymerase epsilon during replication stress	112	
Sappler, Anna		
FACT dynamics during chromatin replication	113	
Schelzig, Korbinian		
Transcription Replication Conflicts contribute to structural variant formation in cancer patients	114	
Scutteri, Lorenzo		
How the dna damage checkpoint overrides	115	
Sergi, Sophia		
Top1 drives mutagenesis at transcription-replication conflicts in an rNMP independent manner	116	
Shatleh-Rantisi, Diala		
A genome-wide, cell-cycle-resolved atlas of DNA double-strand breaks reveals dynamic regulation of genome fragility under replication stress	117	

Shurab, Farah

RUVB-1 prevents replication stress and maintains genome integrity in *Caenorhabditis elegans* 118

Simunovic, Marina

And this is where the MAGIC happens: A machine learning-assisted CRISPR-CasRx screen to uncover genetic drivers of micronucleation in cancer 119

Song, Yawei

High-throughput single-cell profiling of active replication kinetics 120

Spindler, Jessica

Presenter: Pandolfo, Francesca

SLX4IP limits replication stress globally and at ALT telomeres 121

Tellioglu Akcay, Irem

Early detection of carcinogen-induced DNA damage by native long-read sequencing 122

Thomas, Julius

Exploiting interferon/ISG15 pathway as a new vulnerability in BRCA-deficient cancer cells 123

Torres Fernández, Miriam

Impact of replication stress and DNA repair heterogeneity on glioblastoma's treatment resistance 124

Trugenberger, Camilla

Insights into head-on transcription-replication conflict resolution 125

Urién González, Bruno

Presenter: Lemmens, Bennie

2C-RT quantifies genome-wide DNA replication perturbations and redefines RIF1–CDC7 regulation of Replication Timing 126

van den Berg, Jeroen

Replisome dynamics restricts rapid T-cell expansion & effector fate 127

Vanoosthuyse, Vincent

The rapid delivery of RNase H variants reveals distinct classes of RNA:DNA hybrids 128

Wang, Lucia		
Elucidating the mechanism of PCNA unloading by Elg1-RFC		129
Wenz, Friederike		
The role of wnt10b signaling in regulating microtubule dynamics and chromosomal instability in cancer cells		130
Williams, Sophie		
Investigating the mechanisms of replication-coupled nucleosome assembly		131
Woo, Sangmin		
Structural basis of G-quadruplex processing by the AAA+ genome maintenance factor Mgs1		132
Wutz, Gordana		
PDS5 proteins control genome architecture by limiting the lifetime of cohesin-NIPBL complexes		133
Xu, Lexin		
Cell cycle dynamics and the organisation of DNA replication		134
Yeh, Hsin-Yi	Presenter: Chi, Peter	
RAD51 stabilizes telomeric DNA:RNA hybrids through filament-dependent protection from RNase H1 degradation		135
Zhang, Yuxuan		
Genetic dissection of translesion DNA synthesis reveals polymerase-specific effects on BPDE-induced mutagenesis		136
Zuev, Anton		
Role of the PHF14-HMG20A complex in the resolution of R-loop-mediated transcription-replication conflicts		137
