Conservation of an anti-parasitoid gene regulatory network in <i>Drosophila</i>	36
Ansari, Zoya	
Many protein complexes transitioned from homo- to hetero-oligomeric assemblies following eukaryogenesis	37
Baker, Emily Clare	
Living with a killer: how coevolved <i>Saccharomyces cerevisiae</i> become killer toxin resistant	38
Balachandran, Manasvi	
Intrinsic bacterial resistance and its ecological implications	39
Barray, Anais	
High-throughput tools to dissect evolutionary forces shaping gene expression plasticity	40
Bassler, Stefan	
Genomic landscape of cellular lifespan and healthspan	41
Bazin, Adelme	Presenter: Duveau, Fabien
Analysis and simulation of RNA-seq experiments with complex designs including thousands of conditions and interacting variables using HTRfit	42
Behr, Aaron	
Transposable elements are driving rapid adaptation of <i>Enterococcus faecium</i>	43
Bochynski, Christine	
Toxic exploitation of iron uptake in <i>Pseudomonas</i>	44
Castellano-Moen, Isabella	
An alternative genetic mechanism to K1 toxin resistance in <i>Saccharomyces cerevisiae</i>	45
Celdrán Fernández, Carlos	
Iberian Blue Lupin adaptation to drought: metabolomic insights	46

Chaudhary, Disha	
The evolutionary basis of cooperation across species	47
Chen, Jason	
Host-mediated regulation of microbial nitrogen assimilation in a specialized insect-bacterial gut symbiosis	48
Chevyreva, Veronika	
Magnitude of fitness impairment reduces heterogeneity of compensatory evolution	49
Costanzo, Dominick	
QTL Mapping Reveals the genetic architecture of yeast life history traits	50
Craig, Caroline	
The historical origins of human ACE2 binding in bat coronaviruses	51
Cuénod, Aline	
Hidden genome dynamics: structural variation in chronic Burkholderia cepacia complex infections	52
D'Angiolo, Melania Jennifer	
Functional profiling of unknown yeast genes reveals novel mitochondrial players	53
Demirbas, Burak	
Environmental composition and initial metabolic states shape antifungal resistance evolution in Candida albicans	54
Deulofeu Capo, Ona	
The interaction between ecology and evolution in the emergence of toxic Planktothrix blooms	55
Devillers, Hugo	
Unraveling the genomic mechanisms shaping the evolutionary trajectories of Maudiozyma humilis and Maudiozyma bulderi	56
Doberšek, Katja	
Experimental evolution reveals adaptive responses to chemical and thermal stress in Hanseniaspora opuntiae	57

Dubyna, Brooke		
Evolutionary rescue of human disease mutations		58
Fink, Theresa		
High-resolution dose-response profiling reveals the distribution of fitness effects of the first step towards antibiotic resistance		59
Frenoy, Antoine		
Revisiting Luria & Delbrück with stochastic simulations: estimating or accounting for cell demographics and the distribution of fitness effects of mutations		60
Fuqua, Timothy		
Sequence-to-function models reveal the dynamics of enhancer lifecycles		61
Garcias Puigserver, Biel	Presenter: von Mentzer, Astrid	
Mobile elements, not clonal lineages, shape the ecological spread of a bacterial adhesion trait		62
Geng, Yuncong		
Environment-driven microcosms reveal robust functional convergence		63
Genissel, Anne		
TE-mediated rapid parallel adaptation in fungal populations		64
Goeminne, Iris		
Distinct candidate buffer genes shape the fitness effects of different mutation classes in <i>Saccharomyces cerevisiae</i>		65
Gornard, Samuel		
Selection and species threat status: evidence from a comparative genetic time series spanning the duration of human activity		66
Goyal, Varsha		
The evolutionary consequences of ribosomal protein gene variation: from plasticity to adaptation		67
Haberkorn, Chloé		
Riding the heat wave: transcriptomic insights from yeast		68

Hájková, Barbora	
A 5mC-dominated methylome reveals lineage-associated epigenomic variation in cyanobacterium <i>Microcoleus</i>	69
Heineike, Benjamin	
Can conserved protein-protein interactions characterize priority unstudied proteins in fission yeast?	70
Hogan, Andrew	
Systematically quantifying the spectrum of bacterial defenses against protist predation	71
Hsiao, Chen	
The repeatability of eco-evolutionary dynamics in an experimental yeast-alga mutualism	72
Hykl, Ondrej	
Network analysis of antarctic bacterial genomes reveals evolutionarily conserved RiPP biosynthetic lineages	73
Jakubícková, Markéta	
Uncovering novel RiPP biosynthetic potential in Antarctic bacteria through multi-tool genome mining	74
Janacova, Klara	Presenter: Kosek, Dalibor
Structural basis of asymmetric strand transfer in copy-out-paste-in transposition	75
Jia, Tongqiu	
Host-adapted <i>Pseudomonas aeruginosa</i> acquires new alginate-related mutations rather than back-mutating after CFTR modulator therapy	76
Kasmo, Hala	
Identifying condition-specific buffer genes underlying mutational robustness	77
Kloss, Lea	
Fitness landscapes of a minimal cell	78

Konovalovas, Aleksandras	
Respiratory microbial communities and pathogen genomic variation in pulmonary tuberculosis	79
Leu, Ariana	
How transformation affects evolution in changing environments	80
