Scope 1 & scope 2 carbon footprint

Saving: -23%
(2024 vs 2019)

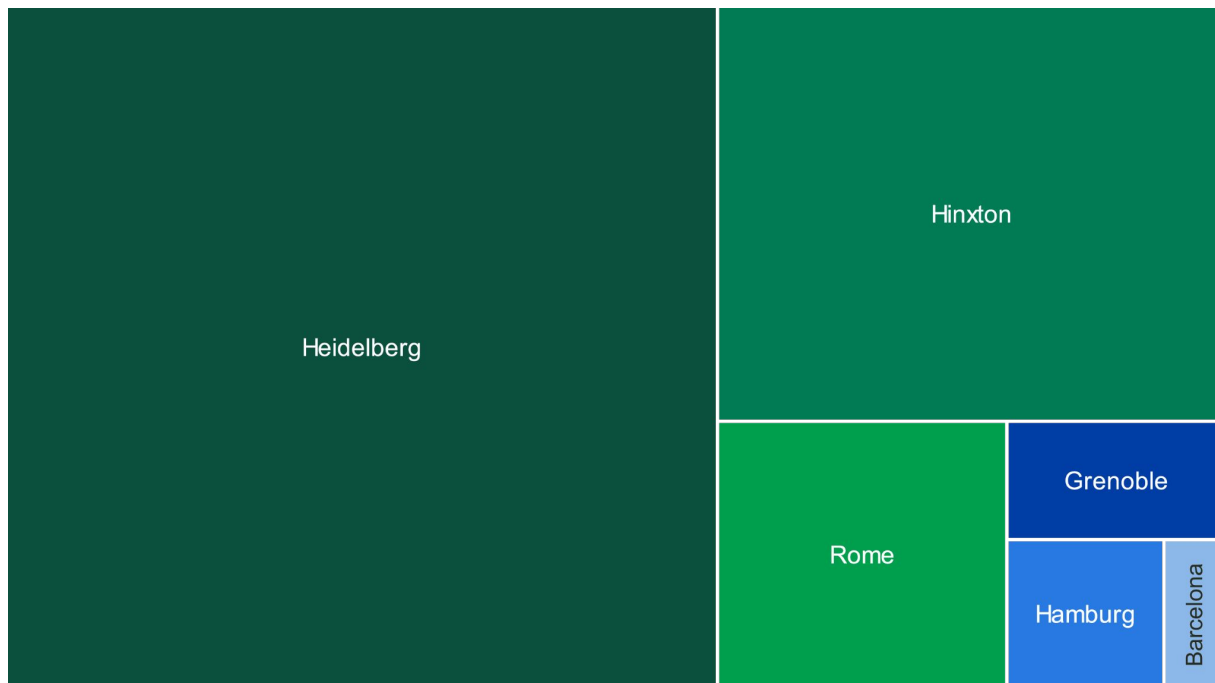

Our carbon reduction target is to reduce Scope 1 & 2 carbon emissions by 50% by 2030 against a 2019 baseline. We are on track to achieve this target.

This target was set using the Science Based Target Initiative's tool and aligns with the global ambition to limit global warming to 1.5°C above pre-industrial temperatures.

2024's emissions have been calculated using 2023 national electricity factors as 2024 factors have not been published.

Scope 1 = Direct emissions from EMBL activities
Scope 2 = Indirect emissions from purchased energy

Absolute carbon footprint breakdown

Energy Intensity

How much energy do we use per square meter of campus, number of employees or papers published?

Energy intensity improved by 32%
(based on kWh per m² of campus, 2024 vs 2019)

To account for the organisation's growth, in terms of campus size, number of personnel and number of publications, we monitor energy intensity against these three metrics. All three are on a downward trend.

Business travel

Our target is a 50% reduction by 2030 against a 2019 baseline

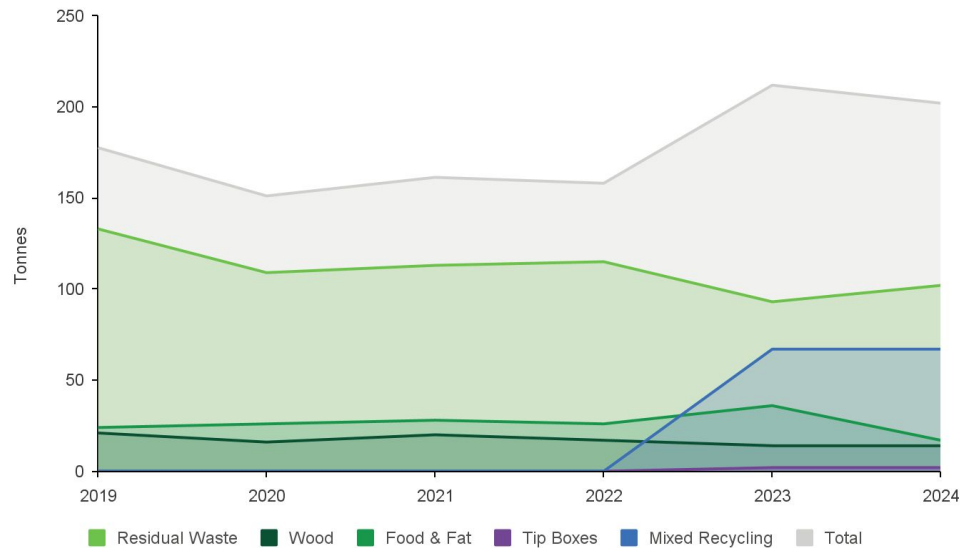

Saving: -18%
(2024 vs 2019)

The pandemic caused an almost complete stop on business travel in 2020 and 2021. Business travel has increased since the pandemic and is now only 18% below 2019's level and we are missing the reduction target.
