

LUMINOSA

Explore new paths in fluorescence confocal microscopy.
Use workflows with minimal user interaction for FLIM and FCS.
Perform FLIM with more contrast and more resolution
with the PDA-23 SPAD Array Detector.

- Dynamic Structural Biology on the Single Molecule Level
- Protein interaction with FLIM FRET and FCS
- Lifetime Imaging for Cellular Sensing, Metabolics & Mechanics
- Study Cellular Mechanisms driven by Phase Separation
- Characterisation of Functional Nanovesicles

Luminosa setup available in the ALMF
from 11 June until end of July.

Please contact almf@embl.de if you
want to use the system.

Luminosa
Single Photon Counting Confocal Microscope
